**Hiring Manager**

Mouser Electronics

**Subject: Application for Junior Developer Position (Fresher with Internship & Project Experience)**

Dear Hiring Manager,

I am eager to submit my application for the Junior Developer position at Mouser Electronics. With my recent degree, targeted internship experience, and a portfolio of hands-on projects, I am prepared to make a positive impact on your development team while continuing to learn and grow in the innovative atmosphere that Mouser embodies. At NS Apps Innovation, I completed an internship where I contributed to a production-quality web application. My primary responsibility was to build and maintain responsive UI components in React.js and to seamlessly connect them to our backend through well-documented APIs. Working in daily scrum routines alongside designers and backend engineers, I became familiar with Agile practices, effective version control through Git, and the nuances of troubleshooting production code. Beyond the internship, I pursued independent projects that allowed me to deepen my technical expertise and showcase my enthusiasm for development. I designed a to-do application using the MERN stack, a personal finance tracker with Tailwind for UI polishing, and an e-commerce prototype that leverages RESTful APIs to simulate a real buying experience. Through these endeavours, I refined my skills in JavaScript, React.js, Tailwind CSS, Node.js, and RESTful service design, while also cultivating teamwork, effective time management, and a meticulous attention to detail. I have a genuine respect for Mouser's unwavering focus on cutting-edge technology, and I would welcome the chance to join your team as a Junior Developer, applying what I know, absorbing new knowledge, and advancing our shared goal of innovation and excellence.

Warm regards,

**Pranav Kumar**
